Isociaciant Synonyms-48 kDa;

Name=Delta; Synonyms-48 kDa;

Isociaciant Synonyms-48 kDa;

Isociaciant Synonyms-48 kDa;

Isociaciant Specificiant Synonyms-48 kDa;

Isociaciant Specificiant Synonyms in heart and skeletal muscle. Also found in placenta, kidney, brain, lung and liver. The presence as well as the abundance of the different transcripts appear to vary significiantly in different tissues and cell lines.

PTM: Phosphorylated.

SIMILARITY: Belongs to the E2F/DP family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Missing (in isoform Beta, isoform Gamma and isoform Delta).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Malibu, CA 90265, USA

This clone sequence is one of 5,000 Ceres full-length cDNAs made available to TIGR and Genbank. The following quality assessment of this set was done by comparison with known proteins: two percent this set was done by comparison with known proteins: two percent the clones are estimated to be 5-truncated; less than one percent are 3.-truncated; approximately two percent represent alternative splice variants, including unspliced introns and spliced exons; one percent may contain premature stop codons; five percent may have frame shifts in a coding region. A sequence is considered to be 5-truncated if it lacks the translation initiation start (ARG). A sequence is considered to be 3'-truncated if it lacks the croneded protein. Please note that these cDNA sequences are derived from the Ws or Laber ecotypes and therefore may contain polymorphisms when compared to sequences from Col-0. Genset carried out the library production and sequences from Col-0. Genset carried out the library production and sequence assembly.

S' sequences, selection of clones, and sequence assembly.
